

Bimmian M Stripe Color Change Kit

In your kit, you will find various colors of stripes.
Choose the three colors that you would like to use on your logo.

Clean your existing logo well with soap and water and apply when dry. Alternatively, it can be applied when wet to give you the ability to slide the decal around before it dries, however, it may also slide when you don't want it to and will take longer to dry.

Remove the CENTER strip from its backing. Starting from the top of the logo, stick only the top part of the sticker perfectly in line with the center stripe on the logo.

Use your finger to move down the sticker, applying the decal over the existing logo. If you notice the sticker is deviating from the lines of the original logo you can make adjustments as you move down the logo. Do not press too hard on the stripe or you will slightly stretch the vinyl. In the event that this happens, no problem, just take a knife and trim as appropriate at the bottom of the logo.

Then apply the LEFT and RIGHT stripes, lining up the stripe against the side of the center. Follow the same application instructions as you did to the center

In the event you are unsatisfied with the outcome, you have 3 options:

1. Minor adjustments may be made by applying pressure to the stripe with your finger and dragging it. This will stretch the vinyl so it can either cover or uncover parts of the logo as desired.
2. If the stripe application has completely failed carefully remove the stripe being careful not to stretch the vinyl. Pull lightly. There will be enough adhesive to reapply the stripe.
3. Order another logo from Bimmian at ½ price. Contact customer service at www.bimmian.com/contact for details.
